

# ELECTRONIC COUNTERMEASURES

---

Often referred to as 'sweeping' or 'debugging', Electronic Countermeasures (ECM) are a vital part of regular security procedures for all major organisations and vulnerable individuals, protecting against the threat of electronic eavesdropping devices. Such threats now come in many forms and the opportunities to obtain sensitive information about your business or you have increased with advances in technology.

Electronic surveillance of sensitive meetings can easily be carried out by interested parties ranging from competitors through to overseas government agencies.

Keypoint, in conjunction with our Audit Com UK Limited (NSI accredited ISO 9001:2001), is able to:

- Advise on the level of support necessary to give a secure and protected environment for meetings
- As part of an initial, free-of-charge consultation, write a preliminary risk assessment survey
- Prepare an Electronic / Security countermeasures plan appropriate to your organization
- Establish the level of ECM awareness training required for your staff
- Undertake an extensive ECM sweep of the relevant office or location
- After each visit, provide a fully-documented report detailing threat analysis, the sweep work undertaken and recommendations on all aspects of information security.
